PROFILE

Hello! I'm Nasser, a technology enthusiast who thrives at the intersection of innovation and problem-solving. My journey started in the IT sector, where I honed my skills in maintaining robust infrastructure and optimizing system performance. But it wasn't long before I was drawn to the dynamic world of software development, which offered endless possibilities for creativity and impact.

Driven by curiosity and a passion for learning, I delved into programming within my organization, equipping myself with an array of tools and frameworks. Today, I am proficient in **C#, React, Node.js, Angular, Next.js, and Nest.js**, among others, and continually strive to stay ahead of emerging trends in technology.

Throughout my career, I've tackled diverse challenges, transforming concepts into tangible, high-performing solutions. Whether collaborating with multidisciplinary teams or working independently, I aim to deliver clean, scalable, and effective code that addresses real-world needs.

I find fulfillment in crafting solutions that blend innovation with efficiency, and I am excited to keep evolving as a professional while contributing to impactful projects. Let's connect to explore how we can collaborate or share ideas to shape the future of technology together.

EMPLOYMENT HISTORY

Tech Lead Cross, Comgás, São Paulo

MARCH 2024 – PRESENT

- Lead and guide cross-functional teams, ensuring all teams are aligned with project goals, timelines, and best practices.
- Architect and design new solutions from the ground up, ensuring that they meet both current and future business needs. This includes defining the overall structure, technology stack, and ensuring seamless integration across all components.
- Collaborate with architects and senior developers to develop scalable, maintainable, and high-performance systems using Angular, ASP.NET, and Kotlin.
- Oversee the creation and management of CI/CD pipelines using Azure Portal and Kubernetes, ensuring smooth deployment and hosting of services.
- Directly manage the process for opening production changes, ensuring each release is thoroughly tested, secure, and deployable with minimal disruption.
- Work closely with development teams to mentor and support them, providing expertise in solving complex technical problems and guiding them in architectural decisions.
- Ensure seamless communication across teams to facilitate the implementation of new features and improvements, maintaining a consistent approach to development and deployment.

Senior Developer, Tech Lead, and DevOps Specialist, Prover Soluções em Tecnologia, Rio de Janeiro

MARCH 2019 – MARCH 2024

- Undertook versatile roles, ranging from senior developer to solution architect, leading diverse projects across various industries.
- Modernized and refactored legacy codebases into efficient, maintainable solutions, with a strong focus on JavaScript technologies like Node.js, NestJS, and Angular.
- Designed and implemented robust authentication and authorization systems using JWT, adhering to the latest security standards and best practices.
- Managed and optimized databases across a wide array of platforms, including SQL Server, Postgres, MongoDB, Redis, MySQL, Oracle, and CosmosDB, ensuring reliability and scalability.
- Developed APIs utilizing ASP.NET, NestJS, and Node.js, complemented by dynamic frontend implementations with React, React Native, Next.js, Redux, Angular, and AngularJS.
- Employed containerization tools like Kubernetes and Docker to streamline application deployment and enhance system reliability.
- Automated deployment processes using GitHub Actions, integrating CI/CD pipelines to enable seamless and rapid delivery cycles.
- Engineered microservices to decouple application responsibilities, facilitating enhanced scalability and maintainability.

Senior Node.js Developer (Part Time Project), Pieracciani (PierX Project), São Paulo

JANUARY 2021 – JUNE 2023

- Designed, developed, and maintained APIs leveraging Node.js and NestJS to deliver high-performance, scalable backend solutions.
- Built dynamic reports using GraphQL, optimizing data retrieval processes for enhanced application efficiency and user experience.
- Refactored legacy code and implemented new features in modern frontend frameworks, including React and Angular, ensuring a seamless user interface.
- Diagnosed and resolved complex bugs, refining business logic to improve system reliability, functionality, and maintainability.
- Administered and optimized MongoDB databases, maintaining data integrity, availability, and robust performance across applications.

EDUCATION

Bachelor in computer science, UNIRP - Centro Universitário de Rio Preto, São José do Rio Preto

JANUARY 2018 – DECEMBER 2021

Computer Science was completed at the Centro Universitário de Rio Preto (UNIRP), which is recognized by Ministerial Ordinance No. 1.260 dated August 23, 1994, with its recognition renewed on December 27, 2018. I've completed the course in 2021 and officially graduated on February 14, 2022, with your diploma in the process of issuance at the time of the transcript's preparation.

Key details of the program:

- **Total workload:** 3,310 hours, including 200 hours of complementary activities.
- **Main subjects completed:** Algorithms and Programming, Discrete Mathematics, Data Structures, Databases, Artificial Intelligence, Computer Graphics, System Security, and others.
- **Projects undertaken:** Final Course Project I and II, as well as Interdisciplinary Projects.

Outstanding academic performance, with numerous grades above 9.
